## DETAILED ACTION

### *Claim Objections*

1. Claims 14-16 are objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. Claims 14-16, are improper dependent claims, drawn to a method while the base claim is drawn to a computer usable medium.

### *Drawings*

2. The drawings are objected to because some words of Figs. 11-12 are not clear. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

*Claim Rejections - 35 USC § 101*

3. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

4. Claims 14-16 and 18-19 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Claims are drawn to a “computer data signal” *per se* as recited in the preamble and as such is non-statutory subject matter. See MPEP § 2106.IV.B.1.a. Data structures not claimed as embodied in computer readable media are descriptive material *per se* and are not statutory because they are not capable of causing functional change in the computer. See, e.g., *Warmerdam*, 33 F.3d at 1361, 31 USPQ2d at 1760 (claim to a data structure *per se* held nonstatutory). Such claimed data structures do not define any structural and functional interrelationships between the data structure and other claimed aspects of the invention, which permit the data structure's functionality to be realized. In contrast, a claimed computer readable medium encoded with a data structure defines structural and functional interrelationships between the data structure and the computer software and hardware components which permit the data structure's functionality to be realized, and is thus statutory. Similarly, computer programs, (i.e. the computer program code which is comprised in the computer data signal as stated by the applicant in the claim), claimed as computer listings *per se*, i.e., the descriptions or expressions of the programs are not physical “things.” They are neither computer components nor statutory processes, as they are not “acts” being performed. Such claimed computer data signal do not define any structural and functional interrelationships between the computer data signal and other claimed elements of a computer, which permit the computer program's functionality to be realized.

*Allowable Subject Matter*

5. Claims 1-13 and 17 are allowed.

6. The following is an examiner's statement of reasons for allowance:

Regarding claims 1, 11 and 17, the prior art of record fail to disclose an article of manufacture comprising a computer usable medium having a computer readable program code comprising: generating a test string including a plurality of performance sensitive reads, including one of a first and second read, determining the probability of occurrence of a given ratio of first to second reads in the test string and storing respective probabilities as calibration parameters for the test string.

Regarding claim 8, the prior art of record fail to disclose an article of manufacture comprising a computer usable medium having a computer readable program code comprising: generating access patterns for reads of data that test reliability of specific functions, identifying the performance sensitive reads in each of the access patterns, each sensitive read including one of a first and second read, and generating a test string including a plurality of the first and second reads, the test string, when applied to a disk drive, being a indicator of possible disk drive failure.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
